intAct Back-Up-Power

Additional batteries | filled and charged

Absolut completely maintenance free | AGM technology | Calcium/Calcium technology

Top-class vehicles have high safety requirements. Now that everything works electronically and nothing is carried out by hand, safety measures must be taken to guarantee energy supply in the event that there is a problem with the main starter battery. Due to the many electronic components, additional consumption has risen enormously.

The Back-Up-Power battery is there simply as a precaution, but one that is entirely necessary. The small power pack is used in vehicles with start/stop features and additional units with high energy requirements, such as redundant safety systems or electric steering. The same pioneering AGM technology that is used in the AGM start/stop battery makes the back-up power battery the ideal support for starter batteries.

Battery	Volt	Capacity	Cold cranking amper	Length mm	Width mm	Height mm	Position of terminal	Terminal	Hold down
BU09	12	9 AH (c20)	120 A (EN)	150	87	106	1	A	keine
BU12	12	12 AH (c20)	200 A (EN)	150	87	145	1	A	keine

Product line: intAct Back-Up-Power
Valve regulated battery, absorbent glass mat, Ca/Ca

Status: GUG = filled and charged

Quality: OEM quality – actual technology

Storage life: Storage life up to nine months

Cycle stability: Three times more cycles compared to normal batteries

Technology: Valve regulated battery, absorbent glass mat, Ca/Ca

Cold start capacity: Increased cold start capacity

Properties: Liquit proved to absorbent glass mat - AGM, useable in constrained position

Use: Vehicles with additional battery
